

High-Quality Test Framework

Chia-Hung Chen

Situation Simulation

Something went wrong, we do the manual test today.

Someone changed my function causing my test case failed.

Test log was not uploaded to our log folder.

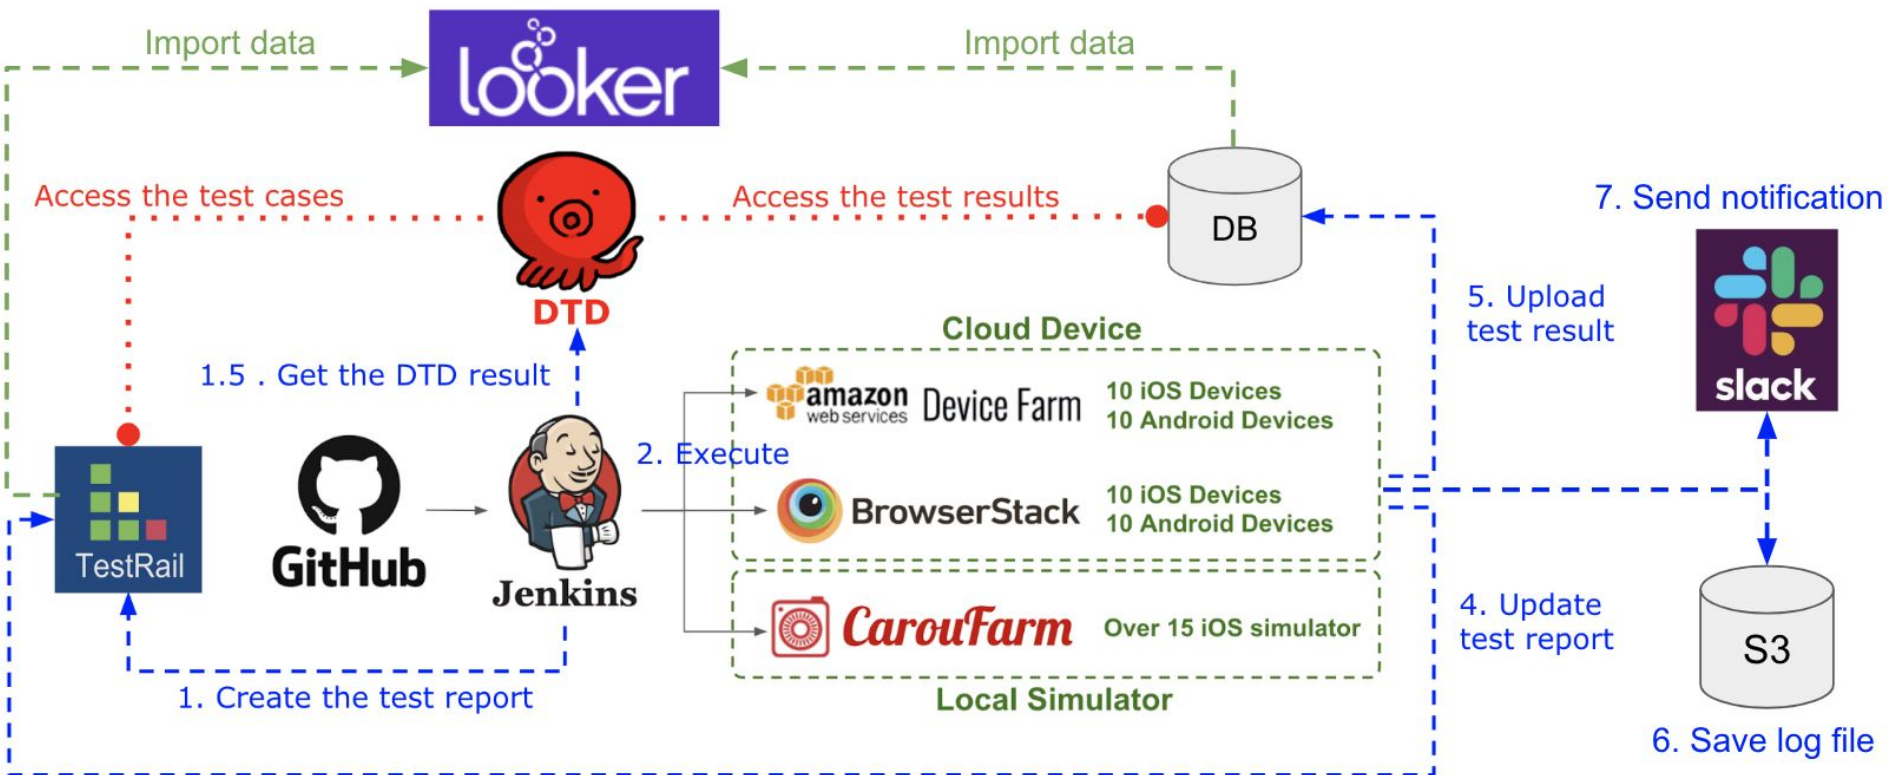

No test report is on the TestRail, please update test result manually.

Test failed notification was not sent to the Slack channel.

My test cases was not be executed.

The overview of our test framework

**What is the condition of
a high-quality test framework?**

The improvement of our test automation framework

1. The test framework should work stable.
2. Execute each test scenario correctly.
3. The test log, test result, and notification are correct.

How do we achieve our goal?

System Level

- Write unit tests on the service-level features.
- Check everything works normally when requesting a pull request.
- The separation of the code, test configuration, test scenario and test data.

Process level

- Security prevention
- Pull request checklist
- Good code review process
 - Our coding guideline
 - Find the potential risk and issues

System level - Unit Test

Writing unit tests on the functions below to make sure everything works before/after merging PRs.

- **Service API**

- Test data preparation

- **Service function**

- Update Test Result to the Testrail
- Upload Test Result to the DynamoDB
- Upload Test Log to the S3
- Send the notification to the Slack Channel
- User Service, Listing Service, Wallet Service...etc

System level - CI

Check everything works normally on the Travis CI before code review.

**Review required**[Add your review](#)

At least 1 approving review is required by reviewers with write access. [Learn more.](#)

**All checks have passed**[Hide all checks](#)

2 successful checks

**Travis CI - Branch** Successful in 5m — Build Passed **Required** [Details](#)

**Travis CI - Pull Request** Successful in 5m — Build Passed **Required** [Details](#)

**This branch is out-of-date with the base branch**[Update branch](#)

Merge the latest changes from `master` into this branch.

Squash and merge

Problem?

System level - Test configuration

Current version

- **Our solution** is to only put a property file template in our repo, everyone need to prepare their property file by following the template on local.
- This property file include any detailed information to execute a test execution. ex: AppiumURL, AutomationName, udid, appPath...
- Load the configuration from property files into environment variable before the test execution.

```
# Mode (Web or Mobile)
# @deprecated
mode=$mode

# Platform (iOS, Android or Web)
platform=$platform

# Additional tags (the platform will always be added as a tag)
tags=$tags

# Package to load the steps from
stepsPackage=$stepsPackage

# Directory to load the features from
features=$features

# Directory for cucumber reports
cucumberReportDirectory=$cucumberReportDirectory

# Directory for cucumber json files
cucumberJsonDirectory=$cucumberJsonDirectory

# URL of a running Appium server instance
appiumUrl=$appiumUrl

# Path to chrome webdriver (for web testing)
webdriverChromeDriver=

# Headless browser testing (web only)
headless=false

# WDA port
```

System level - Test configuration

- Build up the corresponding capability (DesiredCapabilities)

Benefit ?

```
public CapabilitiesProvider getCapabilitiesProvider() {  
    String cloudProvider = System.getProperty(PropertyConstants.CLOUD_PROVIDER);  
    if (cloudProvider.equalsIgnoreCase( anotherString: "local")) {  
        return new LocalCapabilitiesProvider();  
    } else if (cloudProvider.equalsIgnoreCase( anotherString: "aws")) {  
        return new AWSCapabilitiesProvider();  
    } else if (cloudProvider.equalsIgnoreCase( anotherString: "browserstack")) {  
        return new BrowserStackCapabilitiesProvider();  
    } else if (cloudProvider.equalsIgnoreCase( anotherString: "caroufarm")) {  
        return new GridCapabilitiesProvider();  
    } else {
```

System level - Test scenario

Separate the test scenario from our repo (code).

DynamoDB

System level - Test data

Class UserService

...

```
if (configuration.isAndroid()) {  
    dynamoDBTable = "testUsersAndroid";  
}
```

```
if (configuration.isIOS()) {  
    dynamoDBTable = "testUsersIOS";  
}
```

```
if (configuration.isWeb()) {  
    dynamoDBTable = "testUsersWeb";  
}
```

...

The screenshot shows the AWS DynamoDB console interface. At the top, a search bar contains 'testUsers'. Below it, a table lists three tables: testUsersAndroid, testUsersIOS (selected), and testUsersWeb. All are 'Active' with a 'key (String)' partition key. Below the table list, the 'testUsersIOS' table is selected, and the 'Items' tab is active. The 'Create item' button and 'Actions' dropdown are visible. The 'Scan' section shows a scan of the 'testUsersIOS' table with a key. The 'key' field is highlighted in a blue box, and the 'password', 'userid', and 'username' fields are also highlighted in a blue box. The scan results show a list of items: sg_wallet1, signout, sort_user, spc.collection, and stuff_like, each with corresponding values for the highlighted fields.

Process level - Code Formatting

- Everyone's IDE has different code format settings.

```
awsDynamoAccessKey, awsDynamoSecretKey, finalName);  
if (awsDynamoAccessKey == "$awsDynamoSecretKey" || awsDynamoSecretKey == "$awsDynamoSecretKey"  
    || finalName == "$finalName" || awsDynamoAccessKey == null || awsDynamoSecretKey == null  
    || finalName == null || awsDynamoAccessKey == "" || awsDynamoSecretKey == "")
```

```
    || finalName == "") {  
    LOG.info("Set isTestRailFlowEnable as False");  
    return false;  
}
```

Problem?

```
191 +     awsDynamoAccessKey,  
192 +     awsDynamoSecretKey,  
193 +     finalName);  
194 +     if (awsDynamoAccessKey == "$awsDynamoSecretKey"  
195 +         || awsDynamoSecretKey == "$awsDynamoSecretKey"  
196 +         || finalName == "$finalName"  
197 +         || awsDynamoAccessKey == null  
198 +         || awsDynamoSecretKey == null  
199 +         || finalName == null  
200 +         || awsDynamoAccessKey == ""  
201 +         || awsDynamoSecretKey == ""  
202 +         || finalName == "") {  
203 +         LOG.info("Set isTestRailFlowEnable as False");  
204 +         return false;  
205 +     }
```

Process level - Code Formatting

- Our solution is to format your code by this maven-plugin

If you do not format your code, you can not pass the check of Travis CI.

build **passing** license MIT maven central **2.8**

fmt-maven-plugin

Formats your code using [google-java-format](#) which follows [Google's code styleguide](#).

The format cannot be configured by design.

If you want your IDE to stick to the same format, check out [the available configuration files](#)

- [Eclipse](#)
- [IntelliJ IDEA](#)

Process level

- Code Review Process

- Follow our coding guideline

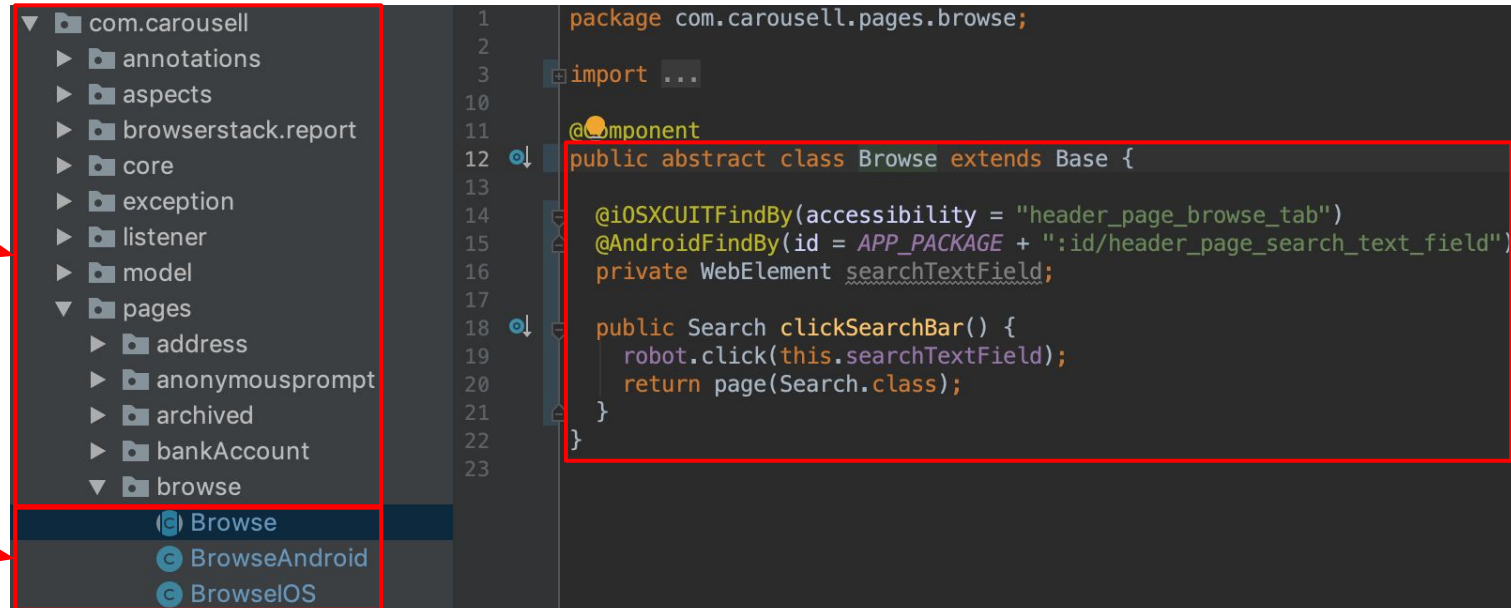

A basic guideline make everyone on the same page to implement features in our test framework.

- Open your mind to discuss the code design if any risks and doubt
- Schedule a plan (Create JIRA tickets) to fix the tech debts time after time

Process level - Our coding guideline

- Naming convention
 - Use camel case for classes, methods and fields.
 - Page objects should be named without Page, PageObject or Screen suffix.
 - Don't use any uppercase letters in package names.

Process level - Our coding guideline

- Code structure

Feature level - User story

```
@case(23110)
Scenario: SG user can add a bank account
Given the user logs in as "sg_wallet1" by skipping ui login
And the user is on the Bank Account Detail page
And the user creates a new bank account - Holder Name "Test",
Then the user sees the new account
```

Step level - User behavior

```
@When("^the user is on the Bank Account Detail page$")
public void theUserIsOnBankAccountDetailPage() {
    page(MePage.class)
        .clickOnMeTab()
        .clickPopupOnNewProfile()
        .clickWalletButton()
        .clickManageButton();
}
```

Page level - Page control

```
/** Click on Me tab */
public MePage clickOnMeTab() {
    robot.click(meTab);
    return this;
}
```

Framework level - Detail operation

```
public void click(WebElement element) {
    LOG.info("Entering click(WebElement element={})", element);
    click(element, DEFAULT_VISIBILITY_TIMEOUT);
    LOG.info("Leaving click(WebElement element={})", element);
}
```

Do not expose the detail operation on the high level class

Process level - Our coding guideline

- Page objects

- Always return an instance of the page after the method finished.
- If the action does not navigate to another page/screen use `return this`.

```
public void clickWalletButton() {  
    robot.click(walletButton);  
}
```

```
public WalletPage clickWalletButton() {  
    robot.click(walletButton);  
    return page(WalletPage.class);  
}
```

```
public MePage clickOnMeTab() {  
    robot.click(meTab);  
    return this;  
}
```

```
@When("^the user is on the Bank Account Detail page$")  
public void theUserIsOnBankAccountDetailPage() {  
    page(MePage.class)  
        .clickOnMeTab()  
        .clickPopupOnNewProfile()  
        .clickWalletButton()  
        .clickManageButton();  
}
```

Method Chaining

Process level - Our coding guideline

- Avoid unused imports

```
package com.carousell.pages.address;

import com.carousell.model.Address;
import com.carousell.pages.BasePage;
import io.appium.java_client.MobileElement;
import io.appium.java_client.pagefactory.AndroidFindBy;
import io.appium.java_client.pagefactory.iOSXCUITFindBy;
import java.util.List;
import org.openqa.selenium.WebElement;
import org.slf4j.Logger;
import org.slf4j.LoggerFactory;
import org.springframework.stereotype.Component;
import com.carousell.pages.UserProfilePage;
import com.carousell.pages.CategoryPage;

@Component
public abstract class AddressPage extends BasePage {
```

Unused import statement

Process level - Our coding guideline

- Avoid commented-out code

```
/**
 * Use GET method to query an endpoint
 *
 * @param request composed by io.restassured.specification.RequestSpecification
 * @param url endpoint
 * @param timeoutSecs timeout for retry
 * @param expectedResponse use HttpStatus.SC_OK... as arg
 * @return
 */
// public Response doGet(
//     RequestSpecification request, String url, int timeoutSecs, int expectedResponse) {
//     timer = new TimeMonitor();
//     timer.setStartTime(System.currentTimeMillis());
//     Response response = null;
//     do {
//         response = request.get(url);
//         timer.setElapsedTime(System.currentTimeMillis());
//     } while ((response.getStatusCode() != expectedResponse)
//         && (!isTimeOut(timer.getDuration(), timeoutSecs)));
//     LOG.info("Receiving the response : {}", response.getBody());
//     return response;
// }
```

Process level - Our coding guideline

- Avoid unused code

```
/** Get Listing Title from product listing by index */
public String getListingTitleOnProductListByIndex(int index) {
    // By byLocator = (By)MobileBy.AccessibilityId("product_card_itemname_label");
    try {
        // List<MobileElement> TitleList = driver.findElements(byLocator);
        LOG.info("ListingTitleList Size : {}", TitleList.size());
        String title = robot.getAttribute(TitleList.get(index - 1), attributeName: "value");
        LOG.info("title : {}", title);
        return title;
    } catch (NoSuchElementException | IndexOutOfBoundsException | CarouLionException e) {
        LOG.warn(
            "[getListingTitleFromProductListByIndex] Something Wrong ! Return Null ! , Exceptio
            e.getMessage());
        return null;
    }
}
```

Process level - Our coding guideline

- Avoid unused class, variable and function

```
@Component
public class GroupsPage extends Base {

    @AndroidFindBy(id = APP_PACKAGE + ":id/text_group_name")
    private WebElement groupName;

    /** Get the name of the group. */
    public String getGroupName() {
        return robot.waitForElement(groupName, timeout: 5).getText();
    }
}
```

Unused class (GroupsPage) 

Unused variable (groupName)

Unused method (getGroupName())

Process level - Our coding guideline

- Javadoc ([Google Java Guide](#))

```
/**
 * Use POST method to query an endpoint
 *
 * @param request composed by io.restassured.specification.RequestSpecification
 * @param url endpoint
 * @param timeoutSecs timeout for retry
 * @param expectedResponse use HttpStatus.SC_OK... as arg
 * @return
 */
public Response doPost(
    RequestSpecification request, String url, int timeoutSecs, int expectedResponse) {
    timer = new TimeMonitor();
    timer.setStartTime(System.currentTimeMillis());
    Response response = null;
    do {
        response = request.post(url);
        timer.setElapsedTime(System.currentTimeMillis());
    } while ((response.getStatusCode() != expectedResponse)
        && (!isTimeOut(timer.getDuration(), timeoutSecs)));
    LOG.info("Receiving the response : {}", response.getBody());
    return response;
}
```

Process level - Our coding guideline

- Logging

- ~~System.out.println()~~ 

- Use a logging framework

- Think about a suitable log level (DEBUG, INFO, WARN, ERROR)

```
if (getSecretValueRequest == null) {  
    LOG.error("Secret {} does not exist in AWS Secrets Manager", secretName);  
    return null;  
}
```

Process level - Our coding guideline

- Exception handling
 - Never catch all exceptions.
Think about which one(s) could be thrown and handle this/these.
 - Use proper logging with a meaningful message.
 - Think about if the exception should fail the current test or not.

```
try {  
    robot.click(okGotItInCateforyPage);  
} catch (Exception e) {  
}
```

```
try {  
    List<WebElement> targetList = driver().findElements(byLocator);  
    LOG.info("targetList Size : {}", targetList.size());  
    return (targetList.size() == 1) && (robot.isDisplayed(targetList.get(0)));  
} catch (NoSuchElementException | IndexOutOfBoundsException e) {  
    LOG.warn("Something Wrong ! Return false ! , Exception : {}", e.getMessage());  
    return false;  
}
```

Process level - Case Study

- Red block sometimes throws a NullPointerException which leads to the following steps not being executed.

```
// Upload the log file to S3
if (s3Service.isEnableS3Service()) { Upload the log to S3
    awsS3LogPathLink = loggingService.uploadJavaLogFile(logFileName);
}

// Get the browserstack session link here Get the sessionID from BrowserStack
AppiumDriver appiumDriver = (AppiumDriver) webDriverProvider.getWebDriver();
String browserstackSessionUrl = browserstackService
    .getBrowserStackSessionUrlFromAppiumSessionId(appiumDriver.getSessionId().toString());

// Upload the test result to the TestRail
if (testRailService.isTestRailFlowEnable()) {
    updateBstackTestResultToTestRail(scenario, awsS3LogPathLink, browserstackSessionUrl);
    testId = testRailService.getLatestTestResult().getTestId();
    testRailService.clearLatestTestResult(); Update the test result to TestRail
}

// Upload the test result to the dynamoDB
if (configuration.isRunningOnClouds()) { Upload the test result to DynamoDB
    testResultService.storeTestResultToDynamoDB(createTestResult(scenario, awsS3LogPathLink));
}

// Send SlackNotification
if (configuration.isSlackEnabled()) {
    updateTestResults(scenario, awsS3LogPathLink) Send Notification to the Slack channel
    sendSlackNotification(scenario, testId);
}
```

Process level - Case Study

1. Red block will not be executed to clear test data If throw AssertionError.
2. Red block should be executed in the teardown step
3. Not each scenario need to execute this step, so we need to create a new service class to handle this detail operation.

```
@Then("^the user sees the new account$")
public void theUserSeesTheNewAccount() {
    Assertions.assertThat(page(SGBankAccountPage.class).isBankAccountCorrect(session.getSessionData("expectedSGAccountNumber").toString(),
        .isTrue();
    Assertions.assertThat(page(SGBankAccountPage.class).isBankNameCorrect(session.getSessionData("expectedSGBankName").toString()))
        .isTrue();

    carousellAPI.getSGWalletSetting(session.getSessionData("token").toString());
    carousellAPI.deleteSGWalletSetting(session.getSessionData("token").toString(), session.getSessionData("id").toString());
}
```

Thanks for your attention!
